

NetKonnnect, an intuitive web-based platform, allows healthcare professionals to securely access live data. By enabling clinicians to access patient data remotely, NetKonnnect allows healthcare professionals to monitor and respond to patient needs without being physically present at the bedside. This mobility ensures that clinicians can provide timely and efficient care, regardless of their location within the hospital or even from off-site locations.

Simplify patient data access for clinicians

Facilitate remote monitoring of multiple patients

Support clinician versatility by implementing effective remote monitoring

PROBLEM

- Overwhelm clinicians with constant monitoring of multiple patients
- Reduce clinician flexibility with additional demands to be physically present for patient monitoring
- Complicate the coordination of patient care by requiring the clinician's physical presence

SOLUTION

- Enable live remote access to patient data from any location within or outside the hospital
- Ensure immediate results and notifications for critical changes in patient conditions
- Streamline monitoring processes for clinicians to manage multiple patients efficiently

RESULTS

- Maximize the use of clinical resources by enabling remote monitoring and efficient workflow
- Prevent delays in responding to critical changes in patient conditions
- Reduce the need for physical bedside presence to access real-time data
